

## Pig Automatic Water Level Controller

As the professional manufacturers, Deba Brothers® would like to provide you Pig Automatic Water Level Controller. Efficient water, no electricity. When water is injected into the set normal water level, the silicone membrane in the cavity is tightly sucked to prevent water from entering. The silicone membrane in the cavity bulges, and water enters the cavity and drains into the water tank through the valve body.

### Product Description

Deba Brothers® is pig automatic water level controller supplier in China. The pig automatic water level controller is made of original plastic, with good gloss, smooth and delicate surface, no particle feeling, safe, non-toxic and durable. The pig automatic water level controller can automatically control the water level of the water tank to realize the possibility of water saving.

### Pig Automatic Water Level Controller Specifications

Product name	Automatic water level controller
Material	The new pc materials, high-quantity silicone pads
Features	High-quantity plastic, durable, anti-aging, corrosion-resistance
Usage	Farm

### Pig Automatic Water Level Controller Advantage

1. Lower costs, reduce sewage discharge.
2. Wear resistance, corrosion resistance and oxidation resistance.

### Production details of Pig Automatic Water Level Controller

1. Hickened water inlet: The interface thread is obviously not easy to slip, and the sealing is good.
2. Engineering materials, environmental protection and safety: start the power water cycle.
3. Working principle, aerodynamics: no need to use electricity, avoid waste.
